

Please do not allow any selfish lobbying groups to limit what XM Satellite radio can do. I understand there is a push from the NAB to limit XM's Instant Traffic and Weather. My feeling is, that if the local broadcasters feel threatened, they should improve their service. I cannot recall 1 instance in the last 20 years where the so called traffic reports from the radio stations helped me at all. They usually told me about a problem after I was already stuck in it! Since it's inception only a few months ago, there have been two instances where the information from XM has been helpful. They also make it very easy for a listener to call in and tell them of a problem. Any attempt to limit their 1st ammendment rights should be ignored.

Thank you
